

TEMPORARY ROAD INSTALLATION, MEXICO

STAGING PLATFORM FOR PERSONNEL AND EQUIPMENT, TENNESSEE

SITE ACCESS FOR FOUNDATION POUR, LOUISIANA

CONSTRUCTION PADS THAT ARE BUILT TO PERFORM

*Rapid Installation.
All-weather Durability.
Environmentally Safe.*

DURA-BASE® Composite Mat System can play a vital role on construction sites by providing a safe, solid, yet temporary base for cranes, transport vehicles and staging areas. DURA-BASE® is the ideal solution for soft or shifting soils and inadequate sub-grades because it distributes the weight of extreme loads over an extensive surface area and keeps your equipment out of the mud.

If your project takes you into harsh weather or sensitive environments, DURA-BASE® provides a ready roadway to the job site and can be used for staging areas where vehicles, materials or equipment can be parked. The mats help keep your job site clean and reduce the amount of mud tracked onto public roadways. Contractors, project owners and customers alike can be confident in DURA-BASE's ability to help maintain a reputation of safety and quality to the public.

DURA-BASE® is designed with special safety features that help protect personnel, equipment and ground surfaces from damage. Anti-static and UV-inhibitors extend the life and utility of the mats. The non-skid tread pattern enables tracked or wheeled vehicles to stop, turn and maneuver with ease. Twist-lock fasteners interconnect the mats to bring stability, convenience and versatility to the matted area with a variety of connection points for multiple mat configurations.

Expert site evaluation and technical support is available.
