

A STURDY CRAWL ROUTE FOR CRANES

*Rapid Installation.
High Performance.
Environmentally Safe.*

DURA-BASE® Composite Mat System can play a vital role on construction sites by providing a safe, solid, yet temporary base for cranes, transport vehicles and staging areas. DURA-BASE® is the ideal solution for soft or shifting soils and inadequate sub-grades, because it distributes the weight of extreme loads over an extensive surface area and keeps your equipment out of the mud.

Safety is always a priority for our clients, so DURA-BASE® is designed to protect personnel, equipment and ground surfaces from damage. The engineered surface is a uniform base upon which to construct scaffolding or platforms. The non-skid tread pattern enables tracked or wheeled vehicles to stop, turn and maneuver with ease. Twist-lock fasteners bring stability, convenience and versatility to the matted area with multiple tab holes and a variety of configuration patterns. Let our technical service personnel assist you in creating the optimal mat placement for your project.

Whether you are constructing from the ground up or renovating an existing structure, DURA-BASE® can enhance the overall job site with convenient access, stable platforms and clean work areas. Contractors, owners and tenants alike, who desire to keep facilities open for business during renovation, can be confident in DURA-BASE's ability to present an image of safety and quality to the public.

Expert site evaluation and technical support is available.
